Data collection logistics

Interviews via CATI
(Home office)

48 interviewers on average

25 minutes per interview
on average

Data Collection

- ✓ May – June, 2020
- ✓ September – October, 2020
- ✓ March, 2021

To reach the sample,
more than 15 thousand
calls were made by
event

Strategies after COVID-19 pandemic

4

- The previous use of digital means of collection for business surveys allowed the Institute to reinforce its use to maintain it definitively.
- The information collection strategies have been adjusted in accordance with the standardization of economic, statistical and geographic activities, with the end of the COVID-19 health emergency on May 9, 2023 by the Mexican government.

INEGI has designed and structured plans of action for contingencies like this and similar types.

Aftermath

- The set of collection means, particularly CAWI, represented the main strength to face the prevailing conditions during the pandemic.
- The set of collection strategies implemented made it possible to maintain the dissemination of all the indicators from the business surveys, without modifying the dates established in the dissemination calendar.
- The main lesson learned was the capacity of informants and collaborators of the business surveys to adapt to all the changes.
- The availability of action plans designed and structured to deal with contingencies of this nature or with complicated scenarios represents one of the most important lessons for the performance of national statistical offices in the future.
